Find the right address

Rabbit, Owl, Fox and Bear live in four houses in a row.

Put one animal in each house. Rabbit lives in house 1. Owl lives immediately next to Rabbit. Fox lives immediately before Bear. Which animal lives in house 3?

RECORD YOUR RESULT

Rabbit = B Owl = W Fox = E Bear = L

QUICK CHECK

Every animal must have a different house.

Complete standalone sample. Answers and optional hints are on sample page 4.

Restore the calibration grid

The keeper's calibration board uses the numbers 1 to 4.

Fill the empty cells. Every row, every column and every outlined 2 by 2 box must contain 1, 2, 3 and 4 once each. Add the numbers in the two shaded cells: row 1 column 2, and row 4 column 1.

1			4
	4	1	
2		4	
	3		1

RECORD YOUR RESULT

The sum of the two marked cells is your signal tile number.

QUICK CHECK

A completed row alone does not prove the whole board is correct.

Complete standalone sample. Answers and optional hints are on sample page 4.

The single true label

Exactly one of four boxes contains the winding key. Exactly ONE label is true; the other three are false.

Test each possible hiding place against all four labels. Box 1 says: "The key is in box 2 or box 3." Box 2 says: "The key is in box 1." Box 3 says: "The key is not in box 3." Box 4 says: "The key is in box 4." Which box holds the key? Its number is key 7.

KEY IN	LABEL 1	LABEL 2	LABEL 3	LABEL 4	TRUE #
1					
2					
3					
4					

RECORD YOUR RESULT

Your table should have exactly one TRUE in the valid candidate row.

QUICK CHECK

A label can be true even when its own box is empty.

Complete standalone sample. Answers and optional hints are on sample page 4.

Hints, answers and the full editions

Cloudpost Rescue

Try a hint: Start with the clue that gives a house number.

Answer: The house order is Rabbit, Owl, Fox, Bear. Fox lives in house 3, so the stamp is E.

Tideglass Observatory

Try a hint: Row 1 needs 2 and 3. Check column 2 to place the 2.

Answer: Rows are 1234 / 3412 / 2143 / 4321. The marked cells are 2 and 4; sum 6. Take tile 6.

The Clockwork Archive

Try a hint: Assume the key is in box 1, then judge every label. Repeat for the other boxes.

Answer: Truth counts by hiding place: box1=2, box2=2, box3=1, box4=2. Only box3 satisfies exactly one true label. Key 7 is 3.

Three complete adventures

Each full set contains a 14-page player booklet and a separate 4-page facilitator guide, in A4 and US Letter. Each has eight base activities and one linked finale. White backgrounds and vector line art suit ordinary home printing.

A$12 per household set / A$29 for the three-set household bundle. Request files: kodyquietcurrent@gmail.com. Subject: TableTrail collection request.

This free sampler contains one complete base puzzle per edition. Full-book stamp and key references are retained to show how the collection works. You can solve every sample without buying anything. Age/time targets are untested design estimates.
